The mucosal resistance of the esophagus was studied by gastroduodenoscopy, manometry and measurement of esophageal pH in 14 patients with severe reflux esophagitis (grade III and IV according to Los Angeles classification) before and after treatment with Sucralfate (400 mg t.i.d. for 4 weeks). In 7 patients reflux esophagitis healed completely (grade 0 or I) and in the other 7 patients the reflux esophagitis decreased (from grade III to II or from grade IV to III). In 6 patients after the treatment mucosal resistance was significantly increased (from -0.49 to +0.24 N/m²), in 7 patients without a change (from +1.50 to +0.45 N/m²). In 4 patients with a residual reflux esophagitis (grade I, II or III) mucosal resistance increased significantly (from +0.37 to +1.10 N/m²). In the 8 patients without reflux esophagitis the increased mucosal resistance was also seen (from +0.90 to +0.59 N/m²). In conclusion, the changes of mucosal resistance in patients with severe reflux esophagitis treated with Sucralfate are dependent on the severity of the reflux esophagitis before the treatment and are consistent with its clinical effect.adidas Boys' Neo Future Shoe Black/Red Regular price£89.00 £99.00 Sale Size S M L XL Quantity adidas Kids' Neo Future shoes are high-tech, breathable and lightweight to make them the most comfortable kids' shoes you'll ever wear.
